Scope 3

Lifecycle Stage Breakdown

Prioritize Use Phase Optimization: Invest heavily in R&D to drastically reduce the product's energy consumption during its operational lifespan through low-power modes and energy-efficient components.

Increase Renewable Energy Sourcing: Expand the use of renewable energy in manufacturing facilities beyond 40%, potentially through Power Purchase Agreements (PPAs) in China to reduce Scope 2 emissions.

Material Decarbonization & Circularity: Engage suppliers for lower-carbon material alternatives, especially for electronics and aluminum, and capitalize on existing take-back programs to enhance recyclability beyond 60%.
