Total Product Carbon Footprint: 33.97 kg CO2e

Consultant: prewdmlqkk

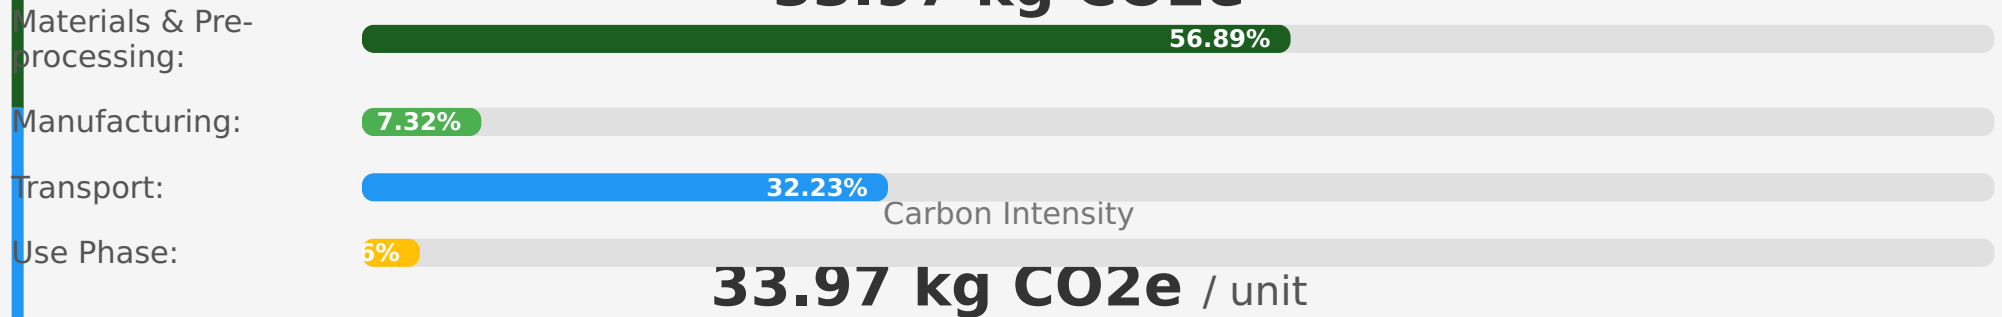

Company: wekueuzrzn

Standard: GHG Protocol (2026 LSR Update)

Scope Boundary: factory_gate (full lifecycle)

Lifecycle Stage Emission Breakdown

Net Product Carbon Footprint
33.97 kg CO2e

Note: Gross positive emissions sum to 50.82 kg CO2e. The End-of-Life stage provided a significant credit of -16.85 kg CO2e, leading to the net total.

Action Plan: Strategies for Impact Reduction

- **Material Optimization:** Focus on exploring lower-carbon alternatives, increasing recycled content, and optimizing product design for maximum material efficiency.
- **Renewable Energy Integration:** Prioritize further increasing renewable energy usage at wekueuzrzn's manufacturing facility and actively advocate for greener grids within the broader supply chain.
- **Logistics Optimization:** Investigate and implement more efficient transport modes, consolidate shipments, and strategically optimize last-mile delivery routes to reduce Scope 3 transport emissions.
- **Circular Economy Focus:** Enhance robust product take-back programs and refine product design for easier disassembly and high-quality material recovery at end-of-life.
