Action Plan: How to Reduce Emissions

- **Renewable Energy Investment:** Prioritize increasing renewable energy sourcing or improving energy efficiency at manufacturing facilities to tackle the largest hotspot.
- **Sustainable Material Sourcing:** Explore alternative materials with lower embodied carbon, optimize designs for material reduction, and engage with low-carbon suppliers for Aluminum and Lithium.
- **Product Energy Efficiency:** Continue designing energy-efficient products for the use phase and promote the use of renewable electricity by consumers in Europe.
- **Enhance Circularity:** Expand take-back and recycling programs further to maximize avoided emissions and explore opportunities for material reuse.
