

Product Carbon Footprint Dashboard **41.027 kg CO<sub>2</sub>e**  
for inuoixktvm Total PCF (1.0 unit)

## Key Metrics

---

**41.027 kg CO<sub>2</sub>e**

Total Footprint

**41.027 kg CO<sub>2</sub>e/unit**

Carbon Intensity

**Use Phase**

Primary Hotspot (~79.4%)

**Scope 3**

Primary Emission Scope (~95.16%)

# Carbon Footprint Breakdown

---

- **Enhance Use Phase Efficiency:** Prioritize product design for maximum energy efficiency during the entire 7-year lifespan.
- **Sustainable Material Sourcing:** Investigate procuring lower-carbon aluminum and plastics with higher recycled content; engage suppliers for primary emission data.
- **Renewable Energy Expansion:** Increase the share of renewable energy in manufacturing operations in China through on-site generation or Power Purchase Agreements.
- **Circular Economy Initiatives:** Strengthen existing take-back and recycling programs and explore design-for-disassembly to maximize material recovery.
