Product Carbon Footprint Dashboard: vkhzhoyulw

Total PCF

29.25 kg CO₂e

Product Name

vhkzhoyulw

1.0 unit analyzed

System Boundary

Factory Gate+

Includes Scope 3 Upstream & Downstream

Primary Production

China

GHG Protocol Standard

Recommendations for Decarbonization

- 1. Enhance Use Phase Efficiency:** Prioritize design for ultra-low energy consumption during operation through efficient components and smart energy management.
- 2. Optimize Material Sourcing:** Increase the use of recycled content, especially for aluminum and plastics, and engage with suppliers for lower-impact materials.
- 3. Increase Renewable Energy in Production:** Aim for 100% renewable energy for manufacturing operations and encourage suppliers to adopt similar practices.
- 4. Strengthen Circular Economy Initiatives:** Expand product take-back and refurbishment programs, and explore advanced recycling technologies for complex components.
- 5. Supply Chain Engagement:** Collaborate with logistics partners to explore lower-emission transport modes, optimize routes, and improve vehicle efficiency.
